Full Stack / MERN Stack Developer with 1.5+ years of experience designing, building, and shipping production web and mobile applications using **React, React Native, Node.js, Express.js, MongoDB, and Java**. Proven record of improving performance, reliability, and delivery speed across cross-platform applications. Strong foundation in **Data Structures & Algorithms, RESTful API design, RBAC/authentication, and Agile/Scrum** delivery, with hands-on experience across the full **SDLC** from architecture to deployment.

Technical Skills

Programming Languages: Java, JavaScript (ES6+), Python, C++, C, SQL

Full Stack / MERN: MongoDB, Express.js, React.js, Node.js (MERN Stack), Next.js, RESTful APIs, Microservices Architecture

Frontend Development: React.js, React Native, Next.js, Redux Toolkit, HTML5, CSS3, Responsive Design, TypeScript

Backend Development: Node.js, Express.js, REST API Design, Authentication & Authorization (JWT, RBAC), WebSockets (Socket.IO)

Databases: MongoDB, PostgreSQL, Redis, SQL, Schema Design, Indexing & Query Optimization

Mobile Development: React Native, Cross-Platform iOS/Android Development

Tools & Methodologies: Git, GitHub, Jest, Supertest, Agile/Scrum, SDLC, Debugging, Performance Optimization, Figma, LLM API Integration, Prompt Engineering

Experience

FULL STACK DEVELOPER | STIKBOOK INC | HYDERABAD, INDIA

NOV 2024 - JUN 2026

- Delivered 3 production applications (Stikbook social platform, SkillOrbit360 recruitment platform, StikExam exam platform) as part of a cross-functional team, owning frontend architecture and contributing to backend services across the MERN stack and Java microservices.
- Reduced UI defect rate by 35% across the React Native mobile app by building a TypeScript-based component library of 25+ reusable, tested UI components - cutting inconsistencies between Android and iOS platforms.
- Accelerated API integration turnaround by 40% by designing and consuming 10+ RESTful APIs (authentication, user management, real-time feed sync) using Node.js/Express/Java, with Jest unit tests covering core flows.
- Improved average screen load time by 28% by refactoring navigation architecture across 15+ screens, eliminating redundant re-renders and introducing lazy loading - deployed via Docker to a Coolify-managed VPS.
- Cut design-to-development handoff time by 50% by owning end-to-end prototyping in Figma (20+ wireframes), collaborating directly with stakeholders to validate flows before a single line of code was written.
- Delivered 15+ production features across Android and iOS on schedule by working within an Agile/Scrum workflow - participating in sprint planning, daily standups, and bi-weekly retrospectives.
- Resolved 20+ functional defects through systematic debugging using Chrome DevTools, React Native Debugger, and structured logging, contributing to zero critical regressions across the final three sprints of the release cycle.

PYTHON DEVELOPER INTERN | HYDERABAD, INDIA

SEP 2024 - OCT 2024

- Reduced reported bugs by 20% by developing and optimizing Python modules through structured testing cycles and systematic root-cause debugging.

WEB DEVELOPMENT INTERN | HYDERABAD, INDIA

JUN 2024 - JUL 2024

- Increased mobile usability scores by implementing responsive design improvements using HTML5, CSS3, and Flexbox/Grid - achieving consistent cross-browser compatibility across Chrome, Firefox, and Safari.
- Contributed to 3 feature releases by participating in code reviews and collaborative sprints, improving frontend performance through targeted JavaScript optimizations and accessibility enhancements.

Production Applications

SkillOrbit360 - Full Stack Recruitment Platform

Technologies: Next.js · TypeScript · Node.js · Express.js · MongoDB · PostgreSQL · REST APIs · Docker · Jest

- Led the frontend architecture decision to use Next.js with SSR for the candidate-facing platform, cutting job-listing page load time by 45% and improving SEO discoverability.
- Designed a role-based system supporting 3 distinct user types (candidate, recruiter, admin) with zero privilege-escalation bugs by implementing JWT authentication and RBAC across every API route.
- Achieved sub-100ms average API response time for job search by designing optimized MongoDB schemas with compound indexes and query projections for candidate, recruiter, and job-data retrieval.
- Maintained 90%+ unit test coverage on core API routes (job management, application workflows, user accounts) using Jest and Supertest, enabling confident refactoring across 4 major feature iterations.

Stikbook – Social Media Platform

Technologies: React Native · Node.js · Java · PostgreSQL · REST APIs · Microservices · Redis · Socket.IO

- Contributed to a microservices architecture splitting the platform into independently deployable Java services for auth, content, feeds, and notifications, supporting 500+ concurrent sessions without performance degradation.
- Helped design the real-time communication layer, integrating WebSockets (Socket.IO) with a Redis pub/sub layer to deliver chat and live notifications with under 200ms latency across services.
- Worked on PostgreSQL schema design and indexing strategy across posts, comments, likes, messaging, and user interaction tables, reducing average data retrieval time by 38%.
- Collaborated on a security-first authentication design using JWT-based auth, token refresh flows, and input sanitization enforced across all microservice boundaries.

StikExam – Online Examination Platform

Technologies: React · Next.js · Node.js · Express.js · MongoDB

- Contributed to the system architecture supporting 200+ concurrent exam sessions with zero data loss, modeling MongoDB schemas for exams, question banks, and results with transaction support for write-critical operations.
- Reduced average page interaction latency by 32% by introducing code splitting, lazy loading, and Next.js static generation for public-facing exam listing pages.
- Enforced strict access control across student, instructor, and admin tiers by building custom role-based access control and session-validation middleware, resulting in zero privilege-escalation incidents in QA.
- Achieved 85%+ test coverage on exam management and result-processing APIs using Jest and Supertest, catching 12 edge-case bugs prior to production deployment.

Vertex – AI Resume-JD Match Analyzer

Technologies: Next.js · React · Tailwind CSS · Gemini API / OpenAI API · Prompt Engineering · Node.js

- Built an AI-powered resume-JD matching tool that extracts resume text via PDF parsing and returns an ATS-style match score, keyword gap analysis, and rewrite suggestions using LLM-based structured output.
- Engineered a strict JSON-schema prompt with the Gemini/OpenAI API, enforcing consistent structured responses (score, matched/missing keywords, suggestions) without post-processing errors.
- Designed a switchable AI-provider architecture (Gemini/OpenAI) via environment configuration, keeping the core matching logic provider-agnostic.
- Extended the AI-matching capability missing from SkillOrbit360, a recruitment platform previously shipped at Stikbook Inc.

Education

Bachelor of Technology (Information Technology) | Jun 2021 – May 2025 | CGPA: 8.87 | MLR Institute of Technology, Hyderabad

Certifications

- PCAP: Programming Essentials in Python
- React Associate Developer Certification – Infosys Springboard
- Data Structures and Algorithms – Smart Interviews
- SQL and Relational Database 101 – IBM
- Python Bootcamp – Udemy
